Rational:

All children have the right to feel safe and well, and know that they will be attended to with due care when in need of first aid. The Care Arrangements are to be read in conjunction with the college Student Health (First Aid) Policy which outlines the college’s responsibility and procedures in respect of our “responsibility to provide equitable access to education and respond to diverse student needs, including health care needs”.

Aims:

Our School will:

- administer first aid to children when in need in a competent and timely manner.
- communicate children’s health problems to parents when considered necessary.
- provide supplies and facilities to cater for the administering of first aid.
- maintain a sufficient number of staff members trained with a level 2 first aid certificate.

Implementation:

As per Medication Policy
As per First Aid Policy

The attached Example proformas (Diabetes / Epilepsy) are also to be read in conjunction with the First Aid Policy which outlines the school’s responsibility and procedures in respect of our “responsibility to provide equitable access to education and respond to diverse student needs, including health care needs”. Confidential records of all students with specific health needs are maintained securely in the general office for reference as required. A First Aid Register is also maintained noting ailments and treatment for all presenting students.

Key Reference:

This form is to be completed by the student’s medical/health practitioner providing a description of the health condition and first aid requirements for a student with a health condition. This form will assist the school in developing a Student Health Support Plan which outlines how the school will support the student’s health care needs.

| **Student self management** |
| Is this student usually able to self manage their own diabetes care? |
| ☐ Yes |
| ☐ No |
| If no, please provide details in relation to how the school should support the student in developing self-management. | 

| **Relevant issues** |
| Please outline any relevant issues in relation to attendance at school and learning as well as support required at school. |

| **First Aid – Signs of Hypoglycaemia (low blood glucose)** |
| Below is a list of observable signs that school staff will look for in relation to a hypoglycaemia. Please provide comment, if required. |

**Mild signs:** sweating, paleness, trembling, hunger, weakness, changes in mood and behaviour (e.g. crying, argumentative outbursts, aggressiveness), inability to think clearly, lack of coordination

**Moderate signs:** inability to help oneself, glazed expression, being disoriented, unaware or seemingly intoxicated, inability to drink and swallow without much encouragement, headache, abdominal pain or nausea.

**Severe signs:** inability to stand, inability to respond to instructions, extreme disorientation, inability to drink and swallow (leading to danger of inhaling food into lungs), unconsciousness or seizures (jerking or twitching of face, body or limbs)
Mild / Moderate Hypoglycaemia signs

Give glucose immediately to raise blood glucose (e.g. half a can of ‘normal’ soft drink or fruit drink (with sugar), or 5 – 6 jelly beans.)

Wait and monitor for 5 minutes.

If there is no improvement, repeat giving glucose (e.g. half a can of ‘normal’ soft drink or fruit drink (with sugar), or 5 – 6 jelly beans.)

If the student’s condition improves, follow up with a snack of one piece of fruit, a slice of bread or dried biscuits only when recovered.

Severe Hypoglycaemia signs

If there is still no improvement to the student’s condition, call an ambulance. State clearly that the person has diabetes, and whether he or she is conscious. Inform emergency contacts.

If unconscious, maintain Airway, Breathing and Circulation while waiting for the ambulance. Never put food/drink in mouth of person who is unconscious or convulsing. The only treatment is an injection of glucose into the vein (given by doctor/paramedic) or an injection of Glucagon.

First Aid – Hypoglycaemia

If you anticipate the student will require anything other than the first aid response noted above, please provide details, so special arrangement can be negotiated.
**Description of the condition**

**First Aid – Signs of Hyperglycaemia (High blood glucose)**

Below is a list of observable signs that school staff will look for in relation to Hyperglycaemia. Please provide comment, if required.

Sings for this condition will emerge over two or three days and can include:
- frequent urination
- excessive thirst
- weight loss
- lethargy
- change in behavior

**First Aid Response – Hyperglycaemia (High blood glucose)**

The school will provide a standard first aid response and will call an ambulance if any of the following is observed or reported:
- Rapid, laboured breathing
- Flushed cheeks
- Abdominal pains
- Sweet acetone smell to the breath
- Vomiting
- Severe dehydration.

Please provide comment, if required.

**Privacy Statement**

The school collects personal information so as the school can plan and support the health care needs of the student. Without the provision of this information the quality of the health support provided may be affected. The information may be disclosed to relevant school staff and appropriate medical personnel, including those engaged in providing health support as well as emergency personnel, where appropriate, or where authorised or required by another law. You are able to request access to the personal information that we hold about you/your child and to request that it be corrected. Please contact the school directly or FOI Unit on 96372670.

Description of the condition

Warning Signs
Can you please outline the warning signs (e.g. sensations)

Recommended support
Please describe recommended care
If additional advice is required, please attach it to this medical advice form

Triggers
Can you please outline the known triggers (e.g. illness, elevated temperature, flashing lights)

Seizure Types
Please highlight which seizure types apply:

- Partial (focal) seizures
  - Which side of the brain is affected?

- Simple partial
  - Staring, may blink rapidly
  - Only part of the brain is involved (partial)
  - Person remains conscious (simple), able to hear, may or may not be able to speak
  - Jerking of parts of the body may occur
  - Rapid recovery
  - Person may have a headache or experience sensations that aren’t real, such as sounds, flashing light, strange taste or smell, ‘funny tummy’ These are sometimes called an aura and may lead to other types of seizures.

- Complex partial
  - Only part of the brain is involved (partial)
  - Person staring and unaware. Eyes may jerk but may talk, remain sitting or walk around
  - Toward the end of the seizure, person may perform unusual activities, eg chewing movement, fiddling with clothes (these are called automatisms)
  - Confused and drowsy after seizure settles, may sleep.

- Generalised seizures
  - Tonic clonic
    - Not responsive
    - Might fall down/cry out
    - Body becomes stiff (tonic)
    - Jerking of arms and legs occurs (clonic)
    - Excessive saliva
  - May be red or blue in the face
  - May lose control of bladder and/or bowel
  - Tongue may be bitten
  - Lasts 1-3 minutes, stops suddenly or gradually
  - Confusion and deep sleep (maybe hours) when in recovery phase. May have a headache.

- Absence
  - Vacant stare or eyes may blink/roll up
  - Lasts 5-10 seconds
  - Impaired awareness (may be seated)
  - Instant recovery, no memory of the event.

- Myoclonic
  - Sudden simple jerk
  - May recur many times.
